PROBLEM STATEMENT

Digital documents are widely used across education and governance, but are highly vulnerable to forgery and tampering. Centralized systems lack transparency and rely on manual verification, making them inefficient and unreliable. With the rise of AI-generated fake documents, there is a need for a secure, automated, and scalable verification system.

SDG MAPPING: SDG 9: Industry & Innovation | SDG 10: Reduced Inequalities | SDG 16: Strong Institutions

ABSTRACT

CipherDocs is a decentralized document verification system using Polygon blockchain. It stores document hashes on-chain and files off-chain to ensure security and scalability. Smart contracts automate verification, while an AI validation layer using Vision-Language Models improves accuracy and usability. The system provides a secure, low-cost, and scalable solution.

AIM & OBJECTIVES

- Tamper-proof document verification
- Automated validation (no manual work)
- Low-cost and scalable using Polygon
- AI-based intelligent verification
- Secure and privacy-preserving access

METHODOLOGY

SYSTEM ARCHITECTURE

RESULTS

APPLICATIONS

- Education: Certificate verification
- Government: Document validation
- Land Records: Property verification
- Employment: Credential verification
- Legal Systems: Legal document validation

Student Details:

Name: Tejas Pokale, Nisha Chavan

Harshvarhdan Nerpagar, Ojas Patil

Final Year B.Tech A.Y.: 2025-26

Guided By: Dr. Rohini Pise
